PROFILE

Software developer working as a programmer at Hermes Engineering Ltd, where I build full-stack web applications with Angular, Node.js, TypeScript and PostgreSQL – and take care of how they are tested, containerized and deployed. Self-taught Android developer in Kotlin: I build my own apps from idea to finished product, such as Snowboard (Firebase, Retrofit, location services). 4th-year Computer Technologies student at the University of Telecommunications and Post, Sofia.

WORK EXPERIENCE

Programmer Feb 2026 – Present
Hermes Engineering Ltd, Sofia

- Develop full-stack web applications: front ends in Angular and Vite/JavaScript, back ends in Node.js (Express, NestJS) with REST APIs and routing.
- Design PostgreSQL databases with TypeORM entities, migrations and seed scripts; write SQL queries.
- Set up GitHub Actions CI and Docker-based environments; deploy to different hosting platforms.
- Built the redesigned website and admin dashboard for Park Hotel Panorama, from design to deployment (see Projects).
- Technologies: TypeScript, JavaScript, Angular, Node.js, Express, NestJS, PostgreSQL, SQL, Docker, Git, GitHub Actions.

Computer Programming Technician Oct 2022 – May 2023
Vola Software Ltd, Vratsa

- Worked on programming and technical tasks in Java and C++ as part of the development team.
- Used Git for version control in a team environment.

Application Developer Oct 2021 – Jul 2022
Vola Software Ltd, Vratsa

- Application development tasks in Java and C++ – my first hands-on experience on a real software project.

PROJECTS

Park Hotel Panorama – Website Redesign & Admin Panel Aug 2026
github.com/Damyan-arch/Park-Hotel-Panorama-2

- Mobile-first redesign of a hotel website (Tryavna, Bulgaria): rooms, gallery, events, amenities, booking requests and contact form.
- Node.js/Express REST API with 28 endpoints; PostgreSQL via TypeORM with entities, migrations and seed data.
- Token-protected admin dashboard where staff manage bookings, inquiries, rooms, gallery, events and hotel info – changes go live instantly.
- Automatic content translation into 5 languages (EN, BG, DE, ES, RO) with the DeepL API and retry on rate limits; photo uploads optimized with Sharp and stored in DigitalOcean Spaces (S3 API).
- Containerized with a multi-stage Dockerfile (non-root user) and Docker Compose with PostgreSQL and health checks; all secrets supplied through environment variables.
- Ported the backend to PHP 8.2 for SiteGround hosting with the same API contract; GitHub Actions CI runs linting, a test suite against PostgreSQL and the frontend build.

Task Tracker – Angular & NestJS Feb 2026
github.com/Damyan-arch/Task-Tracker-Application

- Full-stack task manager: Angular 17 front end with routing, auth guard and HTTP interceptor; NestJS back end with JWT authentication and PostgreSQL via TypeORM.

Snowboard – Android App · Kotlin Dec 2024 – Present
github.com/damian568/SnowBoard

- Snowboarding and ski app with 19 screens: video lessons, weather, slopes, equipment, history of the sport, user profile and settings.
- Sign-up and login with email, Google and Facebook via Firebase Authentication; user profiles stored in Cloud Firestore.
- Current weather for the user's GPS location (Fused Location Provider) from the OpenWeatherMap API using Retrofit and Kotlin Coroutines.
- Nearest slopes sorted by distance (Haversine formula) with live ratings scraped from skiresort.com using Jsoup.
- Embedded YouTube player for lessons, dark mode, Bulgarian and English localization, metric/imperial units.
- Navigation Component, View Binding, RecyclerView, Material Design; feature branches and 20+ pull requests on GitHub.

Valorant Program – Android App · Kotlin Sep 2022 – May 2023
github.com/damian568/Valorant-Program

- Guide app for the game Valorant: 20+ agents, maps and weapons, with video clips and galleries.
- Registration and login with data stored in SharedPreferences; quiz in 3 categories with a final score.
- 70+ Kotlin classes, Navigation Component, RecyclerView and Glide.

Encrypt – IDEA Algorithm Visualizer · Kotlin Mar 2025 – Apr 2025
github.com/damian568/Encrypt

- Android app where I implemented the operations of the IDEA block cipher by hand and display the round calculations step by step: multiplication modulo $2^{16}+1$, addition modulo 2^{16} and binary/decimal conversions.

Portfolio Website · HTML, CSS, JavaScript, Node.js 2025 – 2026
portfolio-damian568s-projects.vercel.app

- Personal site with project filtering and a contact form that sends email through a serverless function with Nodemailer; deployed on Vercel.

Earlier Projects 2021

- **Bar Me** (Java) – sorts venues in Vratsa by distance from the user, shows which are open and draws an ASCII map.
- **Hotel** (C#, SQL Server) – console app for hotel rooms and reservations backed by a database.
- **Math** (C++) – calculates and draws geometric shapes and formulas.

TECHNICAL SKILLS

- **Android:** Kotlin, Android SDK, Fragments, Navigation Component, View Binding, RecyclerView, Material Design, Retrofit, Coroutines, Firebase Auth, Cloud Firestore
- **Web:** TypeScript, JavaScript, Angular, Node.js, Express, NestJS, REST APIs, routing, HTML/CSS, Vite
- **Databases:** PostgreSQL, SQL, TypeORM, MySQL, SQL Server
- **Other languages:** Java, C++, C#; basic PHP and Python
- **DevOps & tools:** Docker, Docker Compose, GitHub Actions CI, Git & GitHub (feature branches, pull requests), Linux, Android Studio, Vercel, DigitalOcean Spaces (S3 API)

EDUCATION

Computer Technologies Sep 2023 – Present
University of Telecommunications and Post, Sofia

Applied Programming – Secondary School Diploma Sep 2018 – Jun 2023
Vocational Technical High School "N. Y. Vaptsarov", Vratsa · dual education program

CERTIFICATES & COURSES

- Java Course – Vratsa Software, Vratsa
- Video Game Development – Telerik Academy, Vratsa
- Internship Program – Technopolis, Vratsa

LANGUAGES

Bulgarian – native · **English** – B2 · **German** – A1
